Merge Sort

- 1) Given a starting deck, check the number of cards you have.
- 2) If the amount of cards is one, you are sorted, return your deck.
- 3) If the amount is greater than one, split the deck somehow, and run Merge Sort on both parts.
- 4) The prior step should yield 2 sorted lists, combine these placing the smaller numbers from each list first until they combine into one list. You are now sorted, return your deck.
